Skill Rating & Benchmark

Section	Your Score	Reference Benchmark (Demo)	Delta	Status
SQL	3 / 10	6.8	-3.8	Needs Work
Python	2 / 10	6.2	-4.2	Critical Gap
Pandas	0 / 10	5.8	-5.8	Critical Gap
Data Visualization	1 / 10	6.0	-5.0	Critical Gap
Applied Statistics	1 / 10	5.5	-4.5	Critical Gap
Machine Learning	4 / 10	5.2	-1.2	On Track
A/B Testing	4 / 10	6.4	-2.4	Needs Work

Attempt Statistics Breakdown

Section	Total Q	Attempted	Correct	Incorrect	Skipped	Accuracy
SQL	5	5	3	2	0	60%
Python	5	5	2	3	0	40%
Pandas	5	5	0	5	0	0%
Data Visualization	5	5	1	4	0	20%
Applied Statistics	5	5	1	4	0	20%
Machine Learning	5	5	4	1	0	80%
A/B Testing	5	5	4	1	0	80%

Executive Summary

The candidate achieved a score of 15 out of 35 correct answers (42.9% accuracy) with a weighted score of 32 out of 70. The results indicate a foundational familiarity with data science concepts but reveal critical execution gaps in core programming, data manipulation, and statistical reasoning. Targeted upskilling is required to transition from theoretical awareness to production-ready technical proficiency.

Key Strengths

- Advanced Concept Exposure:** Familiarity with high-level engineering and modeling concepts, including recursive CTEs, asynchronous time-series merging, and model calibration.
- Broad Curriculum Coverage:** Active engagement with a comprehensive range of topics spanning SQL, Python, Pandas, Visualization, Statistics, Machine Learning, and A/B testing.

Top Blind Spots

- **Pandas & Python Execution:** Gaps in core library mechanics, specifically regarding index resetting, ``merge_asof`` partitioning, and fundamental Python behaviors like decorator execution and tuple properties.
- **Applied Statistics & Probability:** Weakness in foundational statistical frameworks, including Type I/II error definitions, the Central Limit Theorem, and calculating posterior probabilities using Bayes' Theorem.
- **Diagnostic Visualization Interpretation:** Misinterpreting standard diagnostic plots—such as Q-Q plots, calibration curves, and boxplots—which limits the ability to accurately assess data distributions and model reliability.

Actionable Learning Resources

Pandas & Python: Complete the "Data Manipulation with pandas" course on DataCamp, specifically focusing on merging, exploding, and deduplication mechanics.

✓ Action Item

Applied Statistics: Read Chapters 2 and 3 of *OpenIntro Statistics* to master probability calculations, Bayes' Theorem, and hypothesis testing errors.

✓ Action Item

Diagnostic Plots: Study the "Probability plots" section in the SciPy documentation and practice interpreting Q-Q plots using ``scipy.stats.probplot`` on skewed and heavy-tailed datasets.

✓ Action Item

SQL Optimization: Practice the "Advanced SQL" interactive tutorials on Kaggle Learn, focusing on recursive queries, CTEs, and window functions.
