— YOUR SKILL COMPARISON AGAINST AVERAGE SCORE

— You - - Cohort avg

Note: The chart displays average ratings, which are computed by averaging the scores of those who have taken this self-assessment

SKILL	SCORE VS. AVG	
SQL	3.0	▼ 3.8 (avg 6.8)
Python	4.0	▼ 2.2 (avg 6.2)
Pandas	1.0	▼ 4.8 (avg 5.8)
Data Visualization	3.0	▼ 3.0 (avg 6.0)
Applied Statistics	3.0	▼ 2.5 (avg 5.5)
Machine Learning	3.0	▼ 2.2 (avg 5.2)
A/B Testing	4.0	▼ 2.4 (avg 6.4)

— STUDY CALENDAR

7 weeks, one skill at a time, widest gaps first. Every week runs the same 4-day rhythm above.

1 • LEARN

Core concepts end-to-end

2 • PRACTICE

8–10 problems, untimed

3 • TIMED

5 problems in 25 min, no notes

4 • REVIEW

Redo misses, summarize in 3 lines

WEEK 1 **Pandas**

You: 1.0 • Avg: 5.8

Why this week: Dedicated practice with Pandas for data cleaning and transformation will greatly improve your efficiency and problem-solving in data analysis workflows.

WEEK 2 **SQL**

You: 3.0 • Avg: 6.8

Why this week: Focus on foundational SQL concepts and complex query writing will significantly enhance your data manipulation capabilities for interviews and real-world tasks.

→ [SQL Joins and Window functions](#)

WEEK 3 **Data Visualization**

You: 3.0 • Avg: 6.0

Why this week: Developing stronger data visualization skills will enable you to communicate insights more effectively and create compelling narratives in your data science role.

WEEK 4 **Applied Statistics**

You: 3.0 • Avg: 5.5

Why this week: Building a solid understanding of applied statistics will empower you to make more rigorous data-driven decisions and interpret models accurately.

→ [Statistics guide](#)

WEEK 5 **A/B Testing**

You: 4.0 • Avg: 6.4

Why this week: Improving your knowledge of A/B testing methodologies will be vital for designing effective experiments and drawing reliable conclusions in product development.

WEEK 6 Python

You: 4.0 · Avg: 6.2

Why this week: Strengthening your Python programming fundamentals will be crucial for tackling coding challenges and building robust data solutions in your career.

WEEK 7 Machine Learning

You: 3.0 · Avg: 5.2

Why this week: Concentrating on core machine learning algorithms and their practical applications will be essential for advancing in technical interviews and project work.

→ **Supervised and unsupervised learning**

A NOTE FROM YOUR MENTOR

Hi, I'm Siddharth, Director of Data Science at Microsoft and one of the mentors at PrepVector. Thanks for taking the self-assessment — we built it to give you a precise, honest read on where you stand, not just a generic score. The gaps you saw above are common, and every one of them is closeable with the right practice. Below are the resources we'd point you to next, all built by PrepVector to help you get there faster.

— Siddharth R, Director of Data Science, Microsoft

PRODUCT DATA SCIENCE BOOTCAMP

Hands-on, structured programs designed to build real product & data intuition — covering product sense, experimentation, statistics, and applied ML.

[Check Out Product DS Course →](#)

LIVE WORKSHOPS

Interactive, cohort-based deep dives focused on experimentation and A/B testing. Design experiments, analyze results, and make decisions with statistical rigor — guided step-by-step.

A/B Testing Course for Data Scientists and Product Managers

Learn how top product data scientists frame sharp hypotheses, choose the right metrics, and turn A/B results into clear product decisions.

[Check Out A/B Testing Course →](#)

Advanced A/B Testing for Data Scientists

Master the experimentation frameworks used by leading tech teams to design rigorous tests and analyze results with confidence.
