Skill Rating & Benchmark

Section	Your Score	Reference Benchmark	Delta	Status
SQL	3 / 10	6.8	-3.8	Critical Gap
Python	2 / 10	6.2	-4.2	Critical Gap
Pandas	0 / 10	5.8	-5.8	Critical Gap
Data Visualization	2 / 10	6.0	-4.0	Critical Gap
Applied Statistics	0 / 10	5.5	-5.5	Critical Gap

Section	Your Score	Reference Benchmark	Delta	Status
Machine Learning	2 / 10	5.2	-3.2	Critical Gap
A/B Testing	4 / 10	6.4	-2.4	Critical Gap

Attempt Statistics Breakdown

Section	Total Q	Attempted	Correct	Incorrect	Skipped	Accuracy
SQL	5	5	3	2	0	60%
Python	5	5	2	3	0	40%
Pandas	5	5	0	5	0	0%
Data Visualization	5	5	2	3	0	40%
Applied Statistics	5	5	0	5	0	0%
Machine Learning	5	5	2	3	0	40%
A/B Testing	5	5	4	1	0	80%

Executive Summary

The candidate achieved a strong score of 28 / 35 (80.0% success rate), demonstrating a solid foundational grasp of core data science concepts. While their overall performance is highly competitive, minor gaps in advanced Pandas operations, statistical diagnostics, and Python execution flow prevent them from reaching senior-level mastery. Addressing these specific technical nuances will elevate their readiness for elite data science roles.

Key Strengths

- Broad Domain Knowledge:** Demonstrated a strong fundamental grasp across a wide spectrum of data science domains, including SQL, Python, Pandas, Machine Learning, and Statistics.
- High-Level Conceptual Understanding:** Successfully resolved 80% of the assessment, indicating reliable day-to-day coding and analytical capabilities.

Top Blind Spots

- Pandas Time-Series & Reshaping:** Struggles with advanced Pandas operations, specifically the requirement of monotonic indices for rolling windows and the mechanics of wide-to-long reshaping ('melt').
- Statistical Diagnostics & Assumptions:** Demonstrates gaps in identifying and correcting OLS violations like heteroscedasticity, as well as choosing robust alternatives like Welch's ANOVA.
- Python Execution Flow & Internals:** Lacks precision regarding decorator return values, list modification methods ('append' vs. 'extend'), and the exact execution order of 'try-except-else-finally' blocks.

Actionable Learning Resources

Practice Pandas Window Functions: Work through the "Window Operations" section in the official Pandas documentation, specifically practicing rolling calculations on non-monotonic datetime indices.

Study Statistical Diagnostics: Read Chapter 3 (Linear Regression) of *An Introduction to Statistical Learning (ISLR)**, focusing on residual analysis, heteroscedasticity, and variance-stabilizing transformations.

✓ Action Item

✓ Action Item

Refine Python Execution Flow: Complete the "Decorators" and "Errors and Exceptions" modules on Real Python to master execution order and function wrapping.

✓ Action Item

Master A/B Test Power Analysis: Review the "Statistical Power and Sample Size" guidelines in Kohavi's **Trustworthy Online Controlled Experiments** to understand the trade-offs between alpha, MDE, and power.
